2. HEAD & NECK EVALUATION

2101 Extra-oral Soft Tissue NO = No lesion/variatio

Facial asymmetry-significant variations?	Yes	No	If yes, describe:	(textbox)
Skin-lesions observed?	Yes	No	If yes, describe:	(textbox)
Thyroid gland-lesions observed?	Yes	No	If yes, describe:	(textbox)
Salivary glands-lesions observed?	Yes	No	If yes, describe:	(textbox)
Carotid pulse-any significant variations?	Yes	No	If yes, describe:	(textbox)
Lymph nodes-lesions observed?	Yes	No	If yes, describe:	(textbox)

2201 Musculoskeletal

Muscles of Mastication				(dropdown)
Asymptomatic-no issues reported				
Symptomatic-jaw pain or limitations reported				
If symptomatic, describe (familiar pain?, pain intensity?, referred to distant sites?)				(textbox)

TMJ palpation

R Lateral pole (Click Yes to select answers)	Yes	No		
Asymptomatic				(checkbox)
Symptomatic				(checkbox)
Click				(checkbox)
Crepitus				(checkbox)

L Lateral pole (Click Yes to select answers)	Yes	No		
Asymptomatic				(checkbox)
Symptomatic				(checkbox)
Click				(checkbox)
Crepitus				(checkbox)

Mandibular deviation upon maximum opening NO=Normal (<2mm)	Yes	No		
If Yes-Deviation/deflection to R (mm)				(number box)
If Yes-Deviation/deflection to L (mm)				(number box)

Double-click HERE to display TMJ Functional Measurements Diagram

Mandibular Range-of-Motion measurements (reference teeth #8 & #25)

OB-Overbite (vertical mm)				(number box)
Maximum inter-incisal opening (mm, include OB)				(number box)
OJ-Overjet (horizontal mm)				(number box)
Maximum protrusion (mm, include OJ)				(number box)
Maximum R excursion (mm)				(number box)
Maximum L excursion (mm)				(number box)

2301 Cranial Nerve Screening

Sensory/motor abnormalities observed: Y/N	Yes	No		
(if yes, complete Cranial Nerve Screening on <i>Orofacial Pain</i> form)				

2999 Treatment suggestions based on findings

3999 Treatment suggestions based on findings

(textbox)

4. INITIAL PERIODONTAL ASSESSMENT

 Double click HERE to display LSU Modified ADA/AAP Case Type Classifications

4101 PD Probing depths (generalized = more than 30% of sites)

- 0-3 mm
- 3-4 mm
- 5-6 mm
- ≥ 7 mm

(dropdown)

4201 XR Radiographic bone loss from CEJ (check all that apply)

Yes No

- No bone loss
- < 2mm
- 2-3 mm (≤ 10%)
- 3-5 mm (11-30%)
- > 5 mm (>30%)

(if yes, checkall)

4301 Working Diagnosis (Check one)

Yes No

- N/A (not applicable, edentulous)
- Gingival health
- Gingival health or gingivitis on a reduced periodontium
- Gingivitis (I)
- Mild periodontitis (II)
- Moderate periodontitis (III)
- Severe periodontitis (IV)

(if yes, check one)

4999 Treatment suggestions based on findings

(textbox)

ST Lesion Descriptors:

Specific location
Size (mm x mm x mm)
Number/Distribution (single, multiple, diffuse)
Color (normal pink, red, white, mixed red & white, brown, yellow, gray-black, blue-purple, blanches on pressure)
Border definition (well-defined, poorly-defined)
Border symmetry (regular, irregular)
Surface elevation (depressed, flat, raised)
Surface texture (normal, ulcerated, smooth, rough, papillary)
Consistency (normal, soft, fluctuant, firm, hard)
Symptoms (none-lesion is an incidental finding, none-but pt aware of lesion, yes-describe)
Symptoms duration
XR correlation (none, yes-describe)
Comparison to prior images

Use this information to determine one of the following:
a **CUNICAL DX** (based on signs & symptoms)
OR
a **DIFFERENTIAL DX** (minimum 2 possibilities, indicate if biopsy needed)

LSU MODIFIED ADA/AAP CASE TYPE CLASSIFICATIONS

	Gingivitis	Mild (Slight) Periodontitis	Moderate Periodontitis	Severe (Advanced) Periodontitis
Most often correlates with	ADA I	ADA II	ADA III	ADA IV
Gingival Inflammation	BOP +	BOP +/-	BOP +/-	BOP +/-
PD Probing Depth	0 to 3 mm	3-4 mm	5-6 mm	≥ 7 mm
CAL Clinical Attachment Loss	None	1-2 mm	3-4 mm	≥ 5 mm
FI Furcation Involvement	None	Furcation involvement possible	Furcation involvement probable	Furcation involvement probable
XR Radiographic Bone Level	Bone no more than 2 mm from CEJ	Bone >2 mm &/or ≤ 3 mm from the CEJ (or up to ~10% of the actual root length)	Bone is >3 mm &/or ≤ 5 mm (or between 11-30% of the actual root length)	Bone is >5 mm from the CEJ (or >30% of the actual root length)

This chart is intended as a guideline for disease classification. A patient might be diagnosed with more than one condition.

As probing depths do not give enough information to diagnose a patient, the soft tissue margin must be considered (Clinical Attachment Level). A diagnosis of periodontitis is currently rendered based on the patient having loss of the bone or soft tissue, and the severity is dependent upon the amount of Clinical Attachment Loss.

Mobility, variation in the gingival color or contour, and mucogingival issues may be present or absent in any patient. It is important to note if variations in these conditions exist, but none (on their own) will determine the extent of periodontal disease. Likewise, bleeding on probing is a sign of inflammation. Patient factors, including smoking, might mask this condition.

Other Periodontal Observations

Gingival color (normal=coral pink, physiologic pigmentation, red, purple=cyanotic)
Papilla contour (normal=pointed, min-mod-sev blunting, hyperplasia)
Gingival consistency (normal=firm, soft, spongy, swollen=edematous)
Gingival deficiencies (none, gen or local, min-mod-sev, recession, lack of KG, clefts)
Clinical Attachment Loss (min-1-2mm, mod-3-4mm, sev->5mm; loc or gen)
Furcation involvement (gen or loc)
Mobility (none, gen or local, class 1=more than normal, class 2=up to 1mm B-L or reduced periodontium, class 3=more than 1mm B-L and/or vertically depressible)
Plaque (gen or local, min-mod-sev amount)
Calculus (gen or local, min-mod-sev amount)

5. OCCLUSAL EVALUATION

5001 Skeletal

- Skeletal Class (profile vertical) (dropdown)
- Mesognathic-Class 1
- Retrognathic-Class 2
- Prognathic-Class 3
- Skeletal Harmony (frontal horizontal) (dropdown)
- Open (midface < lower face)
- Normal (midface = lower face)
- Deep (midface > lower face)

5101 Individual Arch Assessment

? Click on green ? at bottom of form
Copy and paste into answer text box

- ?Maxillary Arch Assessment Summary (textbox)
- ?Mandibular Arch Assessment Summary (textbox)

Inter-arch Relationships in Maximum Intercuspal Position (MIP)

5201 Horizontal MIP (Angle's Classification)

Double-click HERE to display Angle's Classification Diagram

- Right Angle's Classification (dropdown)
 - R molar/cuspid--Class I Mesognathic
 - R molar/cuspid--Class II Retrognathic
 - R molar/cuspid--Class III Prognathic
 - R molar/cuspid--N/A
- Left Angle's classification (dropdown)
 - L molar/cuspid--Class I Mesognathic
 - L molar/cuspid--Class II Retrognathic
 - L molar/cuspid--Class III Prognathic
 - L molar/cuspid--N/A
- Incisor Position (check one)
 - Labioversion, proclined as Angle's Class II Div 1
 - Retruded centrals, reclined as Angles Class II Div 2
 - Incisor position--N/A

5301 Vertical MIP (Occlusal Vertical Dimension)

- ?OVD Assessment Summary (textbox)

? Click on green ? Mark at bottom of form
Copy and paste into answer text box

5401 Transverse MIP (Crossbite)

- No crossbite (checkall)
- Anterior crossbite
- Right posterior crossbite
- Left posterior crossbite

(textbox)

5999 Treatment suggestions based on findings

(textbox)

Individual Arch Assessment Criteria

- Intact arch
- Crowding
- Spacing (other than missing teeth)
- Partially edentulous--one or two missing teeth within arch (not including 3rd molars)
- Partially edentulous--three or more missing teeth in arch (not including 3rd molars)
- Completely edentulous
- Ridge defects (size, alignment, inter-arch space, shallow palate, combination syndrome...)
- Hard-tissue defects (bony undercuts, spicules, residual roots...)
- Soft-tissue defects (vestibule depth, frenum attachments...)

Angle's Classification Diagram

Occlusal Vertical Dimension Criteria

- Normal OVD (up to 33% vertical overlap of incisors)
- Loss of OVD-excessive posterior wear
- Loss of OVD-lack of posterior support (collapsed occlusion)
- Anterior-excessive wear (< 1/2 normal tooth height)
- Anterior deep-bite (more than 50% vertical overlap)
- Anterior edge-to-edge (no vertical overlap, 0 mm)
- Anterior open-bite (no vertical overlap, negative mm)

COE Examination Criteria

Response Type
